Day: 19 (06-11-2026)	**DAX Functions, New Measures & Hide columns in Power BI**	Documented By:
Task – 2		Sujit T K

1.) SUM()

Use DAX Function SUM() on revenue field to calculate 'Total Revenue' measure

Total Revenue = SUM(ORDERS[REVENUE])

2.) AVERAGE()

The DAX function AVERAGE() on revenue helps to derive 'Average Revenue' measure

Average Revenue = AVERAGE(ORDERS[REVENUE])

3.) COUNTROWS()

DAX Function COUNTROWS() can be used to deduce measure 'total number of orders'

Total Orders = DISTINCTCOUNT(ORDERS[ORDER_ID])

4.) DISTINCTCOUNT()

The DAX function DISTINCTCOUNT() helps to calculate measure 'Total Customers'. It skips the duplicated values.

Total Customers = DISTINCTCOUNT(ORDERS[CUSTOMER_NAME])

5.) DIVIDE()

A DAX function that takes in two numeric values and performs arithmetic division. If the division results in NaN, then the third value is substituted.

Average Order Value = DIVIDE([Total Revenue] / [Total Orders])

6.) IF()

A control statement that checks on a boolean condition and substitutes second argument value if true or substitutes third argument value if false otherwise.

7.) CALCULATE()

Calculates an expression a er applying a specified filter condition.

Fitness item Sales = CALCULATE(ORDERS[Total Revenue], ORDERS [PRODUCT_CATEGORY] = "Fitness")

8.) SUMX()

Calculates an expression row by row and adds all the results.

Total Revenue = SUMX(ORDERS, ORDERS[QUANTITY] * ORDERS[UNIT_PRICE])

This calculates total revenue for each row.

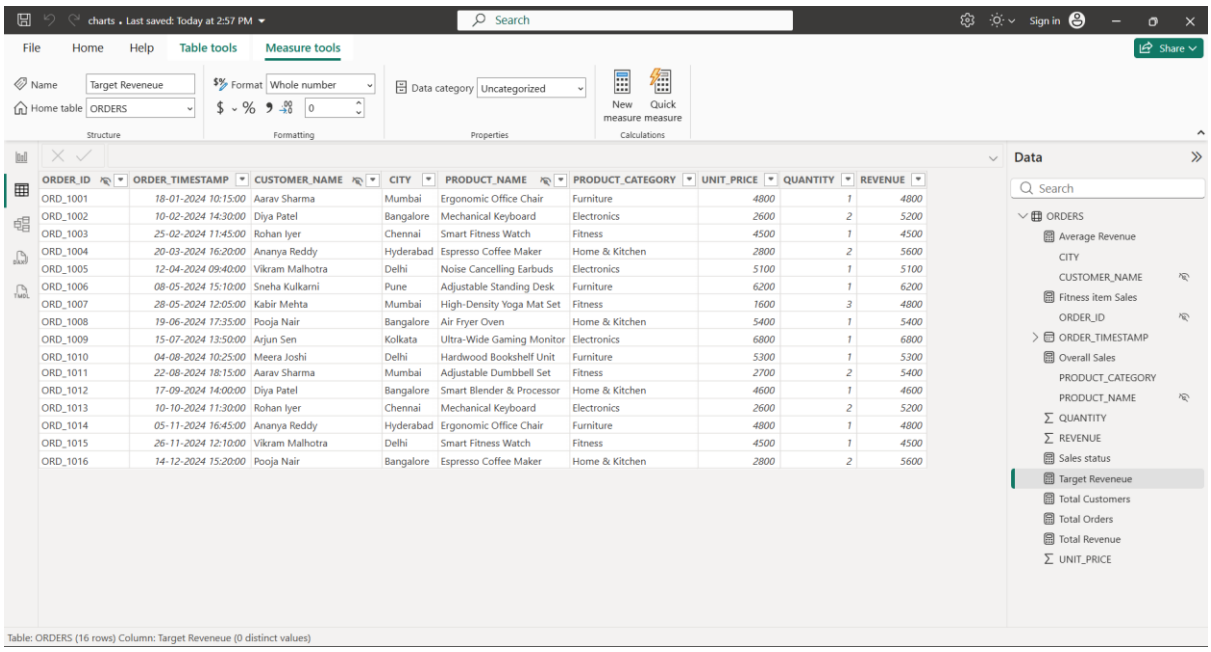

9.) SWITCH()

Checks multiple conditions and returns the matching result.

Overall Sales = SWITCH(TRUE(), [Total Revenue] >= 100000, "HIGH", [Total Revenue] >= 75000, "NORMAL", "LOW")

This determines the value of overall sales based on total revenue.

10.)Hide all the unnecessary fields (columns)

ORDER_ID	ORDER_TIMESTAMP	CUSTOMER_NAME	CITY	PRODUCT_NAME	PRODUCT_CATEGORY	UNIT_PRICE	QUANTITY	REVENUE
ORD_1001	18-01-2024 10:15:00	Aarav Sharma	Mumbai	Ergonomic Office Chair	Furniture	4800	1	4800

ORD_1012	17-09-2024 14:00:00	Diya Patel	Bangalore	Smart Blender & Processor	Home & Kitchen	4600	1	4600
ORD_1013	10-10-2024 11:30:00	Rohan Iyer	Chennai	Mechanical Keyboard	Electronics	2600	2	5200
ORD_1014	05-11-2024 16:45:00	Ananya Reddy	Hyderabad	Ergonomic Office Chair	Furniture	4800	1	4800
ORD_1015	26-11-2024 12:10:00	Vikram Malhotra	Delhi	Smart Fitness Watch	Fitness	4500	1	4500
ORD_1016	14-12-2024 15:20:00	Pooja Nair	Bangalore	Espresso Coffee Maker	Home & Kitchen	2800	2	5600

Order ID, Customer Name and Product Name are hidden in reports view.

11.)With newly created measures, design the dashboard using cards, bar graph, scatter plot, donut chart and other types of charts.
